

Setup and configure L2TP/IPSec-PSK VPN on Windows 10

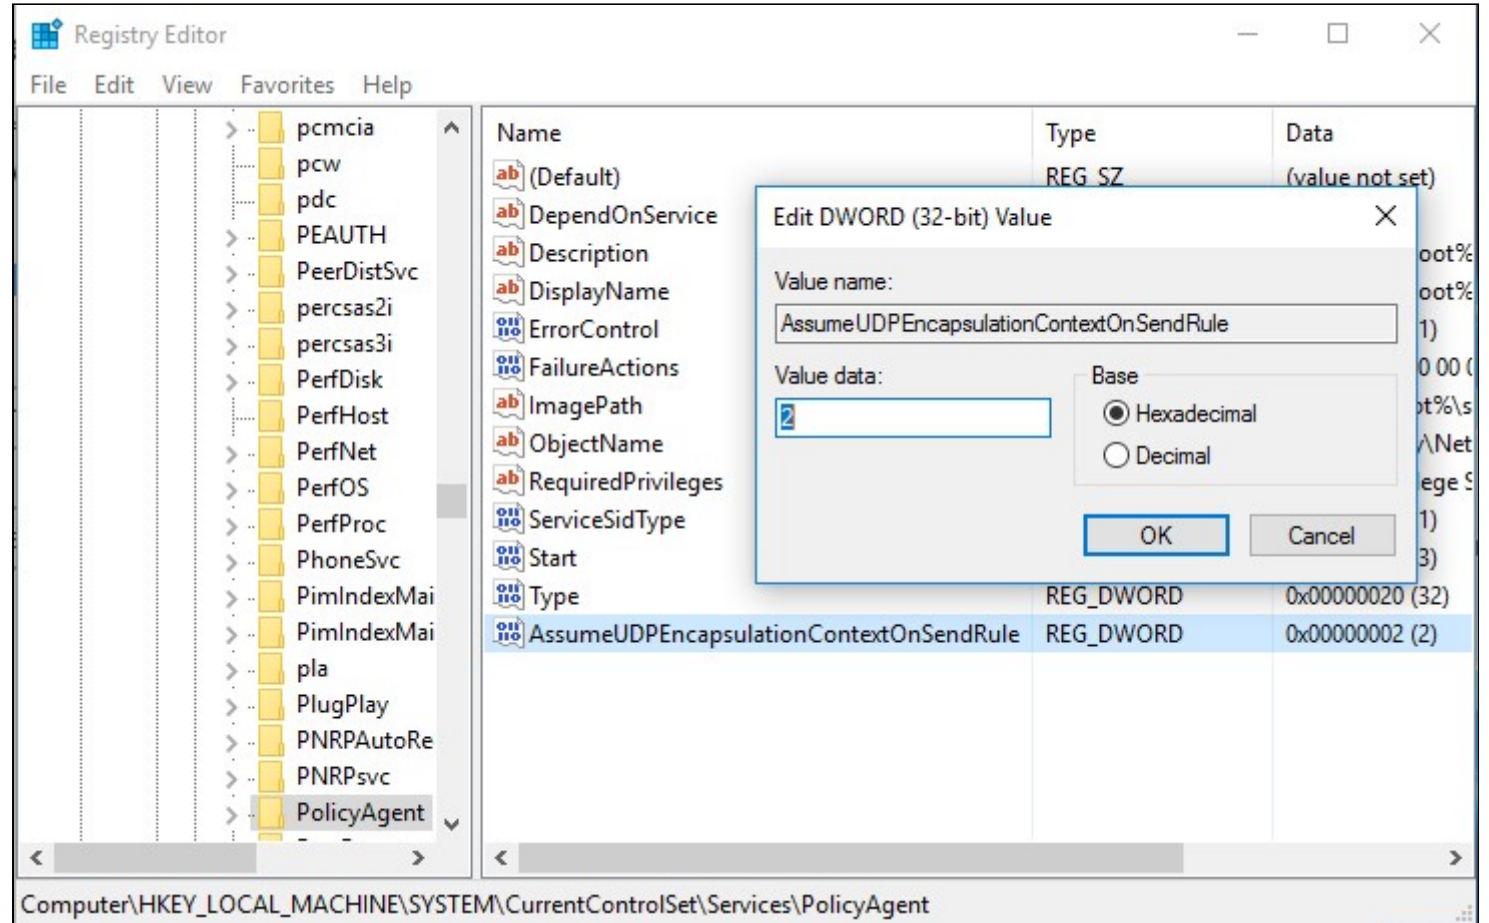

Attention! In order to get L2TP/IPSec working correctly with Windows, it is necessary to make changes to the registry (add a parameter). This problem is listed on the official Microsoft website <https://support.microsoft.com/en-us/kb/926179>. This procedure will be described below in (1) of this manual. If you are not ready to make changes to the Windows registry, then you can set up VPN with PPTP protocol (see PPTP settings [here](#)), which not required the modification of the registry.

Skip this step if your applied the patch 1. Making changes to the Windows registry (Administrative rights):

1) Run **regedit** with administrative privileges and locate the section

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\PolicyAgent

2) Create **DWORD (32 bit)** parameter **AssumeUDPEncapsulationContextOnSendRule** and set value **2** for it.

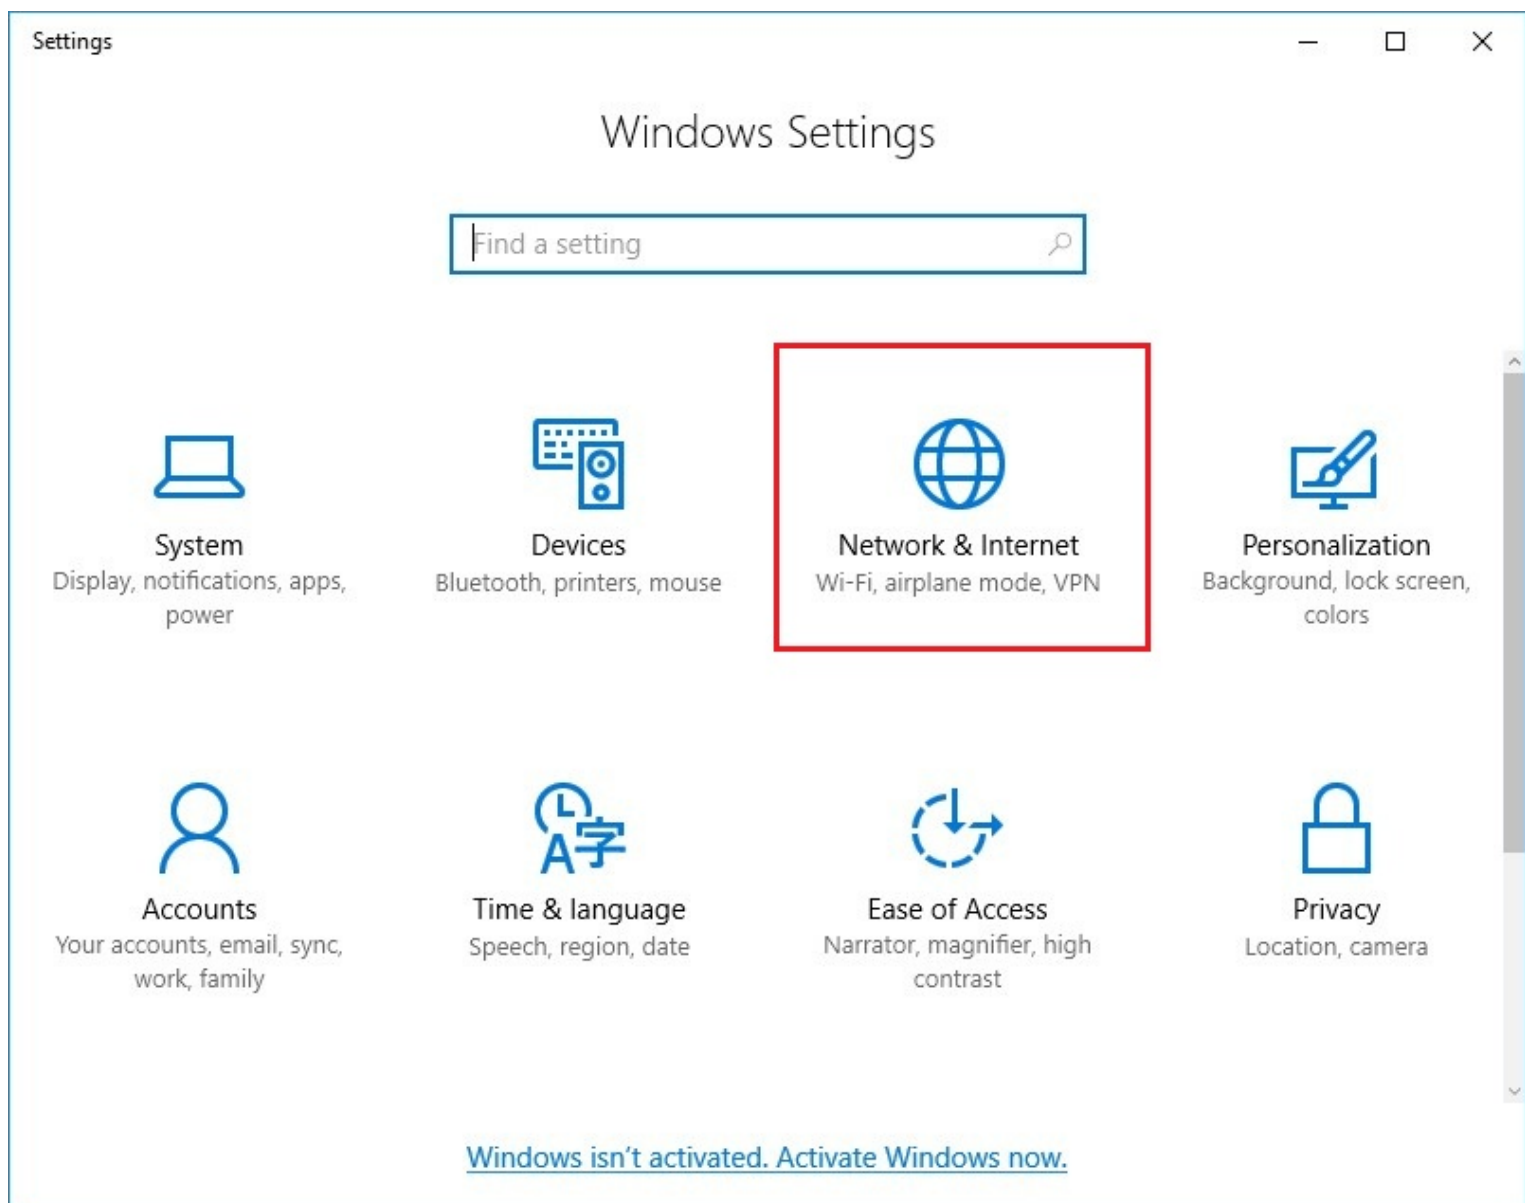

3). **Restart Windows!!!**

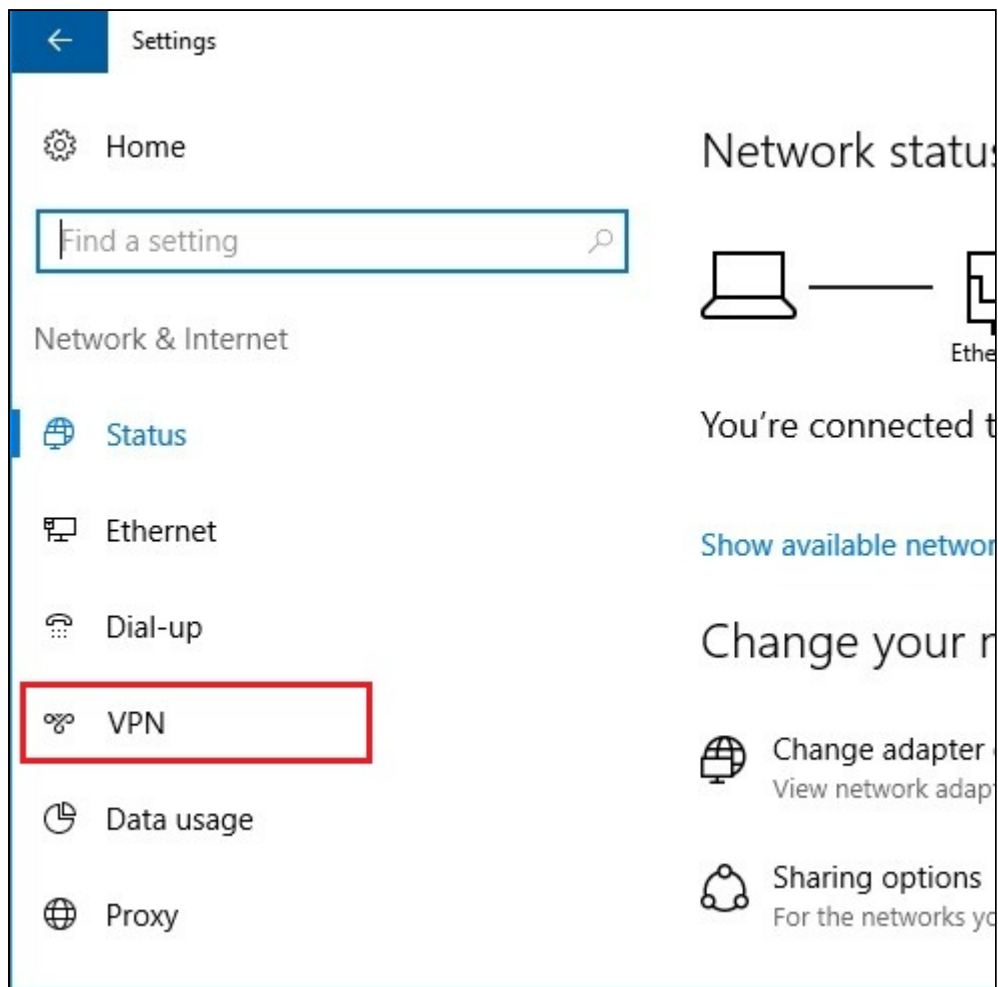

2. After registry has been modified and computer was restarted, we can start to configure L2TP/IPSec connection. Click "**Start**" button and select "**Settings**" icon:

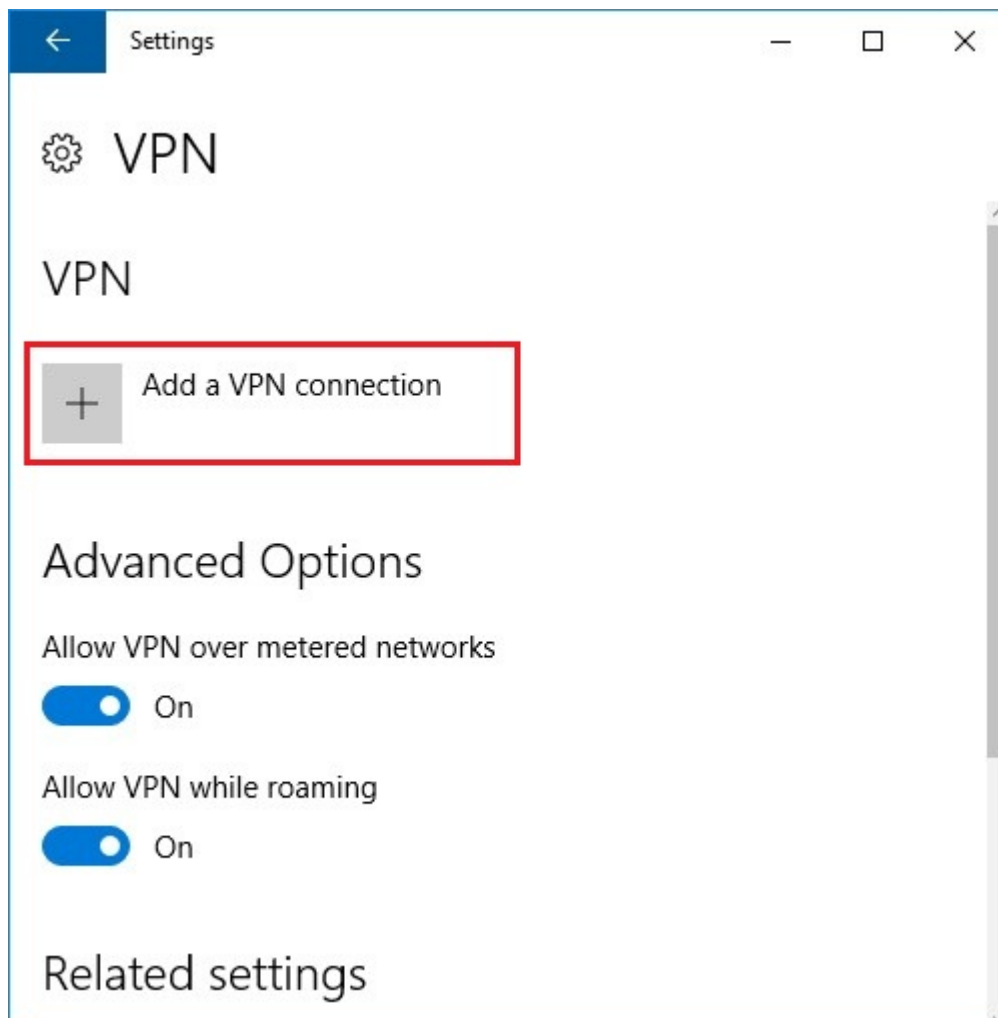

3. Click "**Network & Internet**":

4. Click "VPN":

5. Click "Add a VPN connection":

6. On the next page:

- * in the list "VPN provider" select "Windows (built-in)"
- * in the "Connection name" field, enter the name of the connection, for example, "VPN-SMART"
- * in the field "Server name or address" enter given **ip-address of your VPN server**
- * in the list "VPN type" select "L2TP/IPSec with pre-shared key"
- * in the field "Pre-shared key" enter given **IPSec pre-shared key**
- * in the list "Type of sign-in info" select "User name and password"
- * in fields "User name (optional)" and "Password (optional)" enter given **VPN user name (e-mail)** and **VPN password**
- * Check "Remember my sign-in info" checkbox and click "Save" button:

Settings

Add a VPN connection

VPN provider
Windows (built-in) ▼

Connection name
VPN-SMART

Server name or address
XX.XX.XX.XX ← Given IP address of your VPN server

VPN type
L2TP/IPsec with pre-shared key ▼

Pre-shared key
..... ← IPSec pre-shared key

Type of sign-in info
User name and password ▼

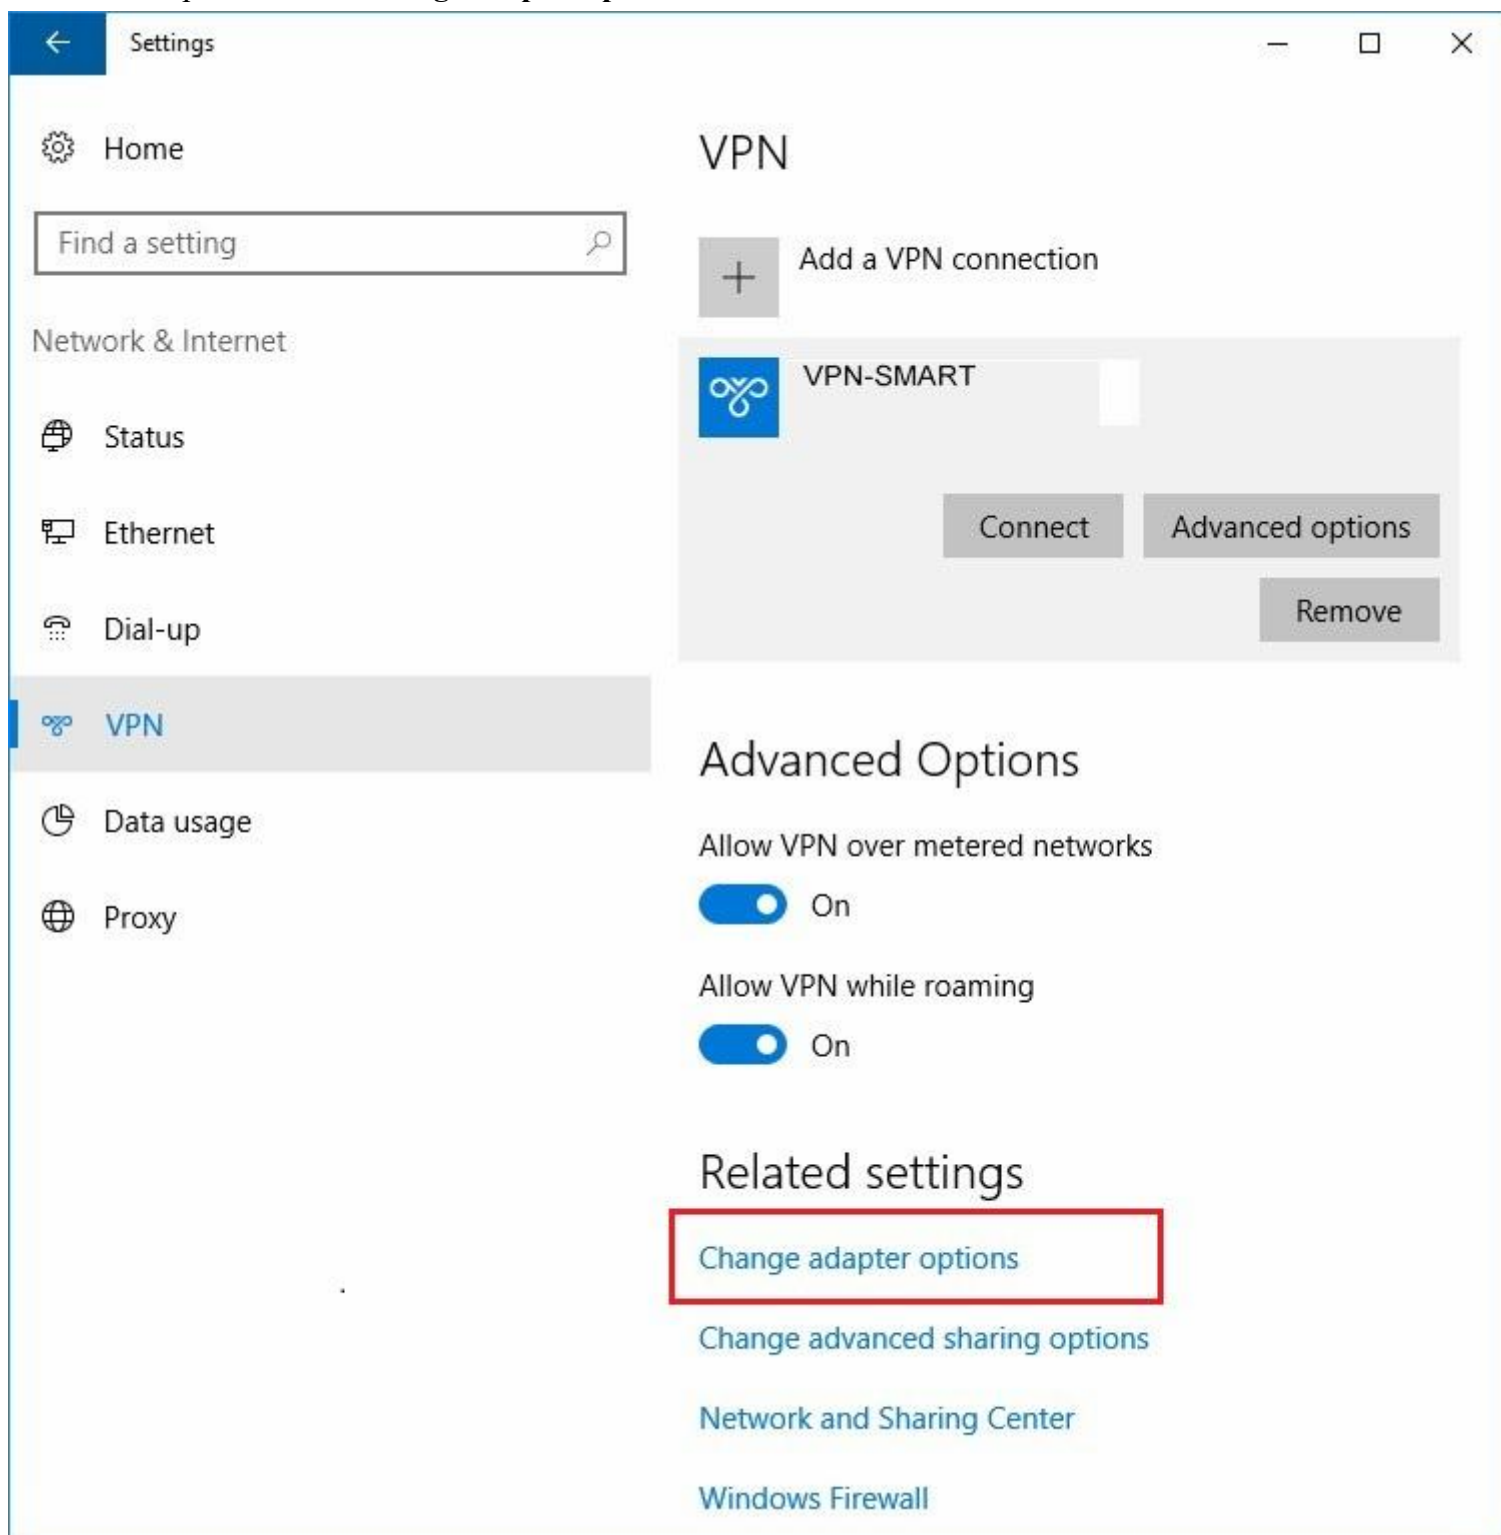

User name (optional)
example@gmail.com ← VPN user

Password (optional)
..... ← VPN password

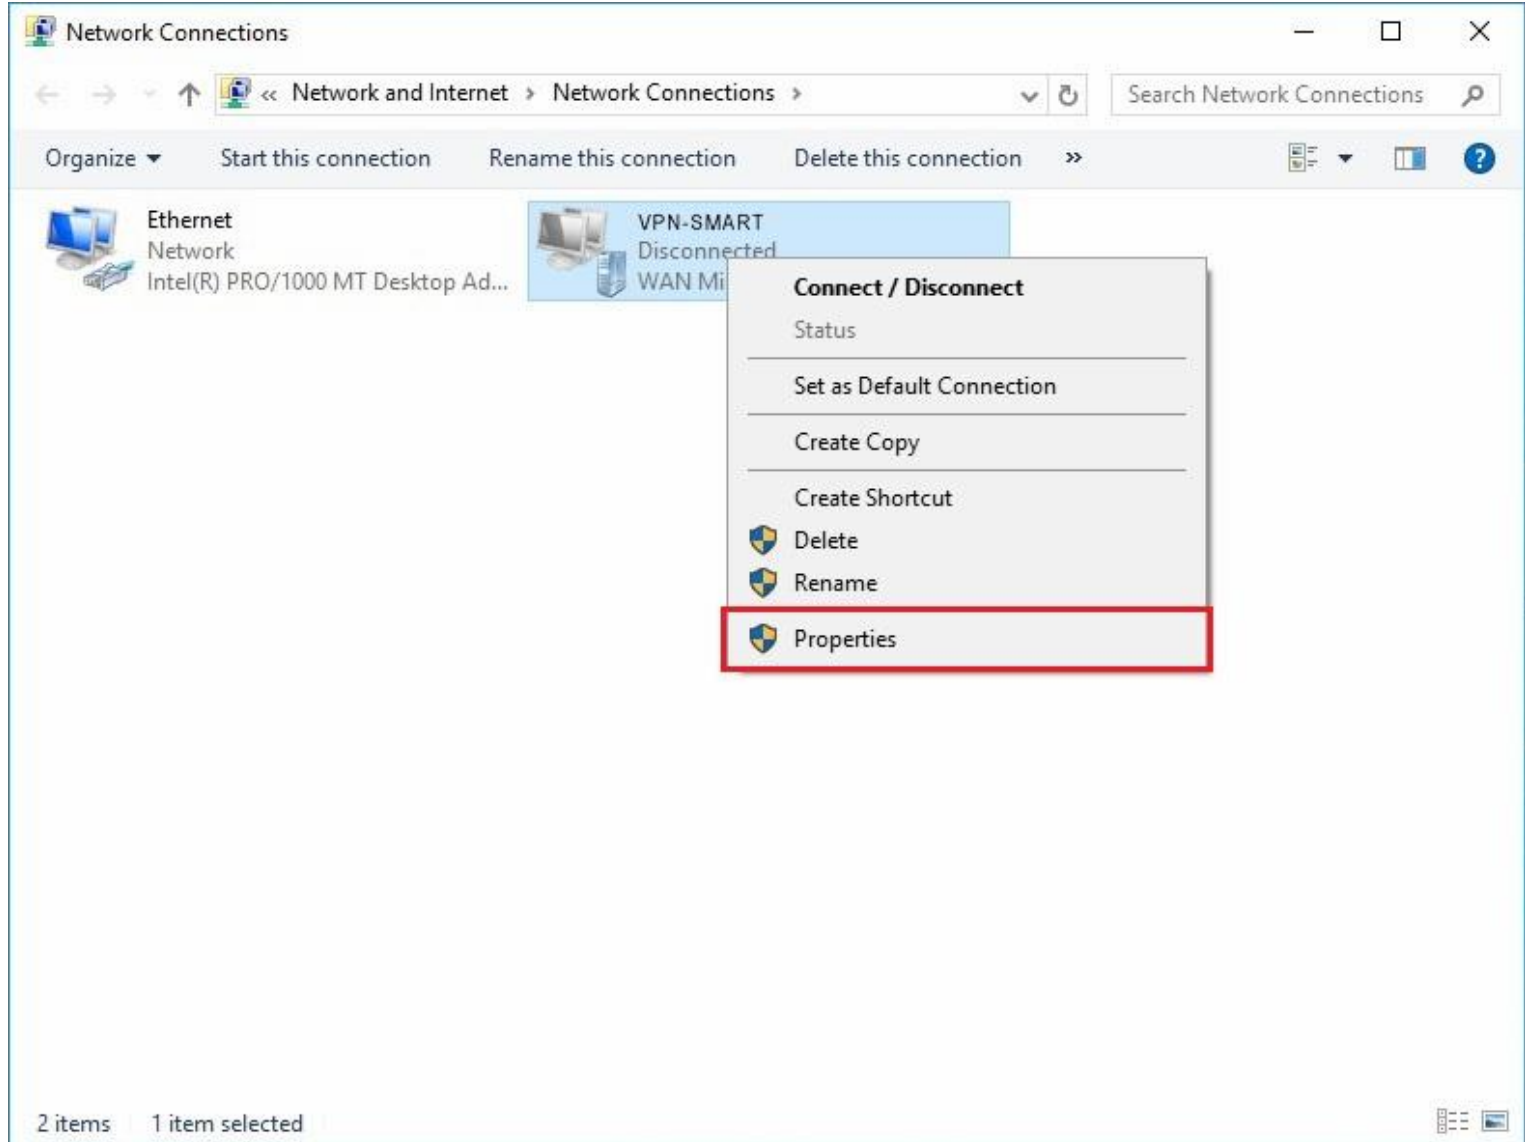

☒ Remember my sign-in info

Save Cancel

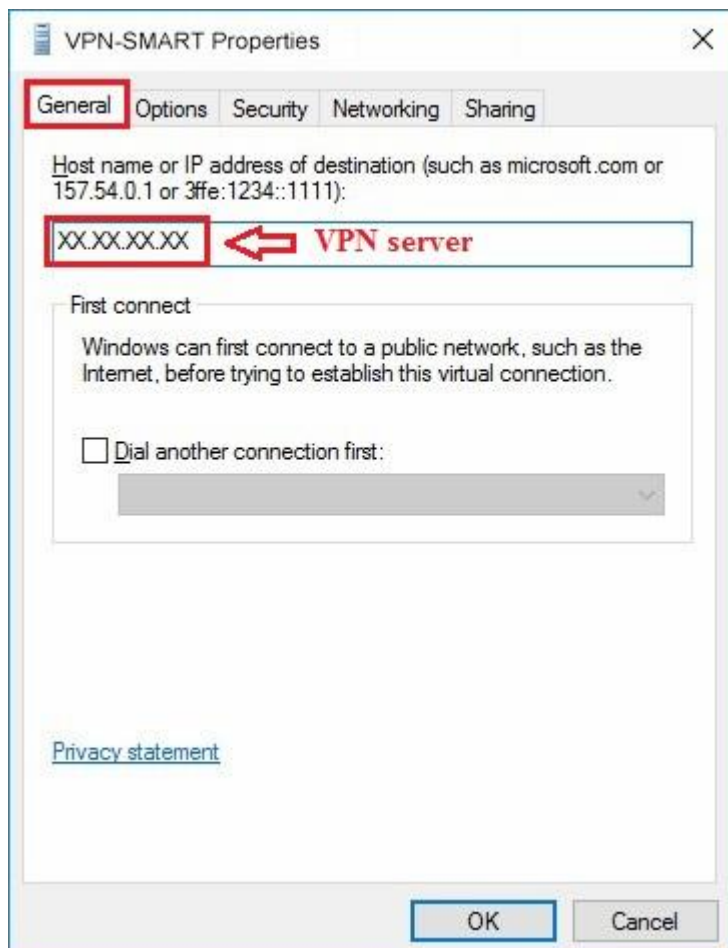

7. At this stage, a newly created connection **VPN-SMART** is ready, but network adapter is not yet configured. Do not connect now, please click "**Change adapter options**":

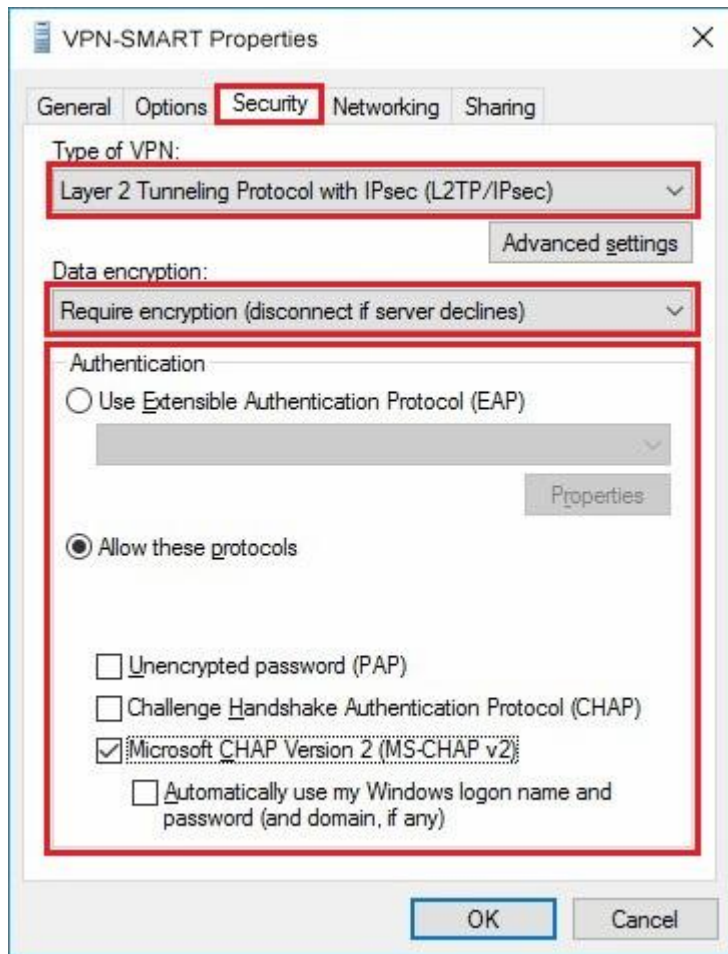

8. In context menu of a newly created connection **VPN-SMART** click "**Properties**":

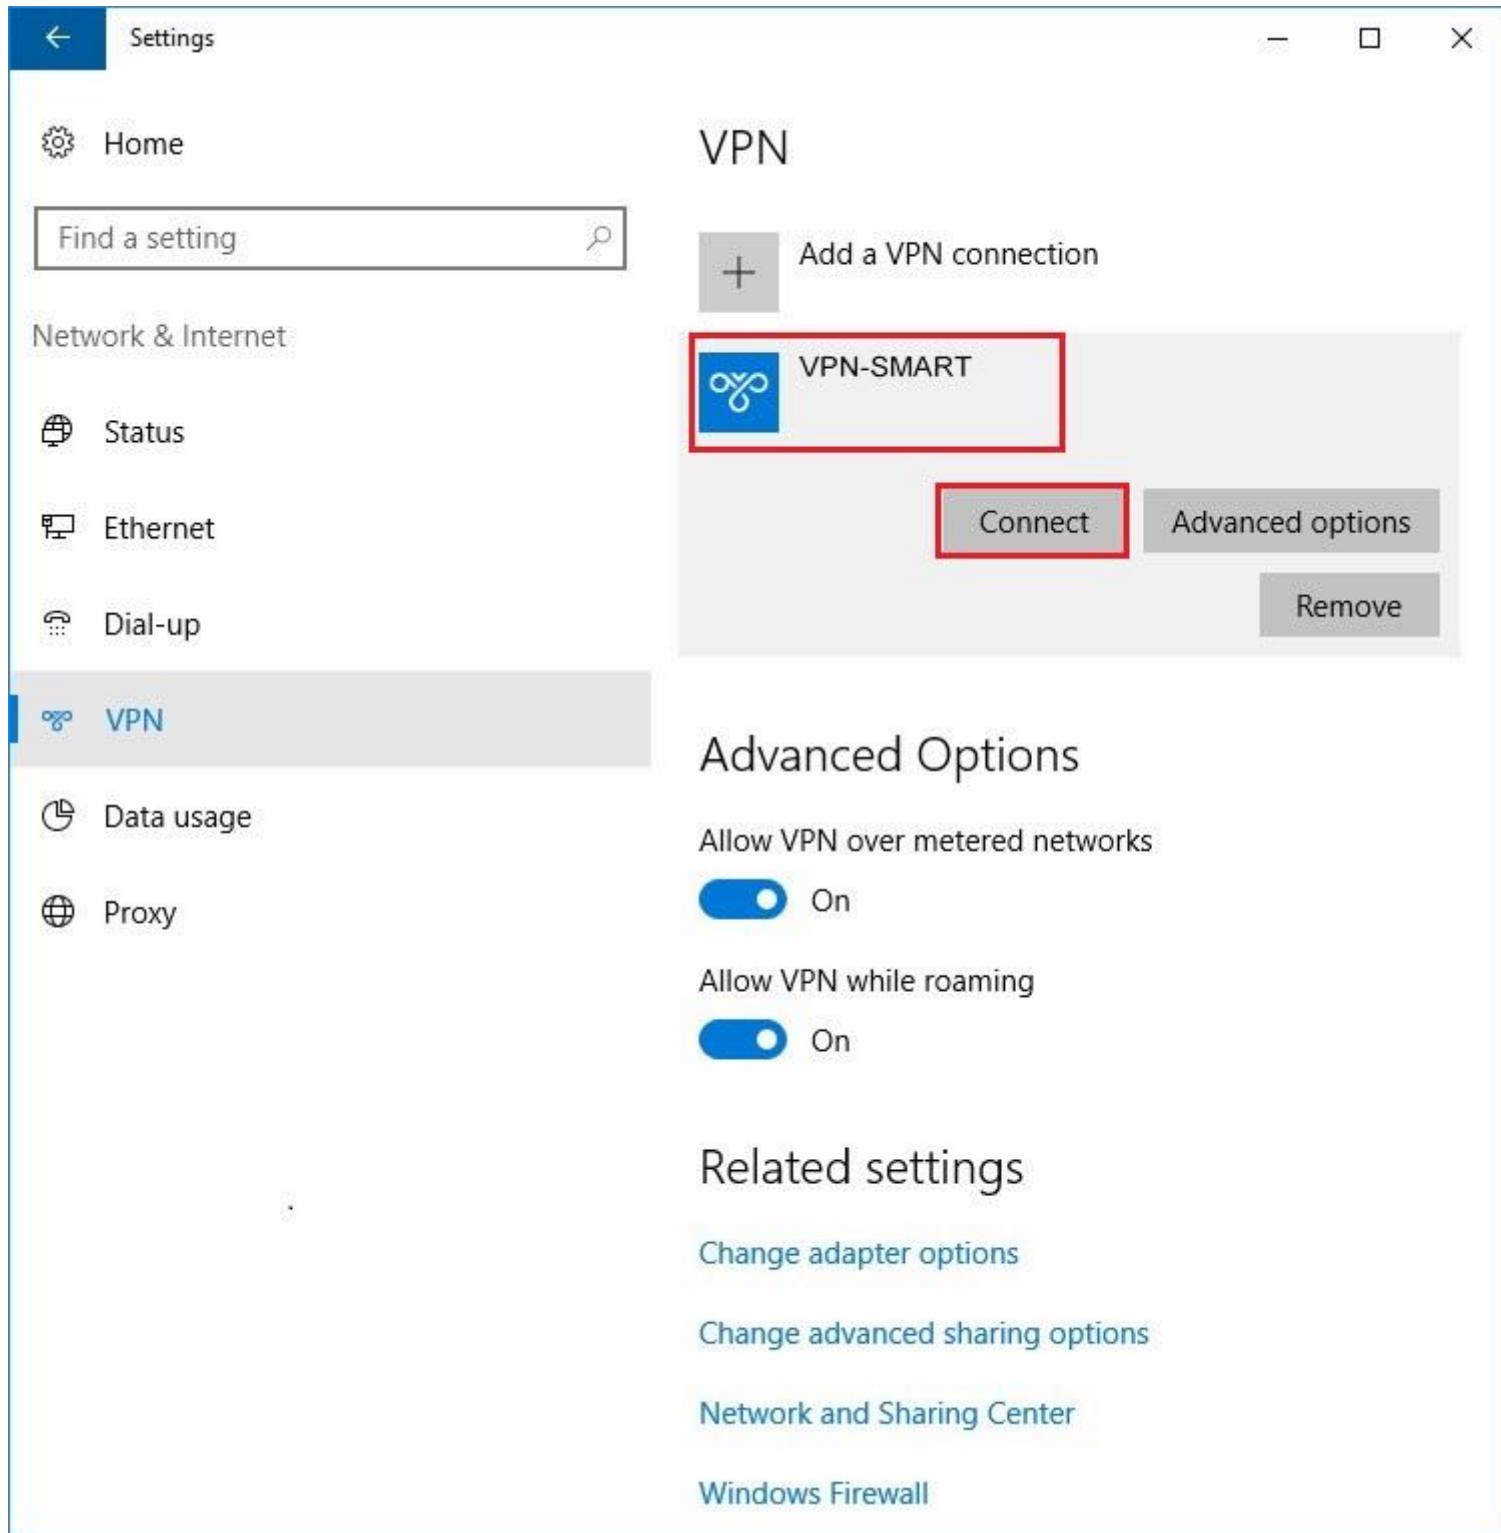

9. Check again the **given ip-address of your VPN Server** on "**General**" tab:

10. Go to "Security" tab. Set **Type of VPN** as "**Layer 2 Tunneling Protocol with IPsec (L2TP/IPsec)**" and **Data encryption** as "**Require encryption (disconnect if server declines)**". Then check "**Microsoft CHAP version 2 (MS-CHAP v2)**" checkbox and click "**OK**". Also close the previous "Network Connections" window:

11. Now everything is ready. You can connect to VPN server. To get connected please click "**Connect**" button in the window "**Settings->Network & Internet**". If buttons Connect, Advanced Options and Remove are not visible then click "**VPN-SMART**" to display them:

From now, after VPN-connection has already been created, it can be turned on/off from "**Network**" icon:
